CONTENTS

Foreword ................................................................. v
Preface ................................................................. vii

MODELS AND MECHANISMS IN PARALLEL COMPUTATION

A general-purpose shared-memory model
for parallel computation ........................................... 1
Vijaya Ramachandran

Supporting a coherent shared address space across
SMP nodes: An application-driven investigation ............... 19
Angelos Bilas, Liviu Iftode, Rudrajit Samanta,
and Jaswinder Pal Singh

Single-message vs. batch communication ....................... 61
Mark W. Goudreau and Satish B. Rao

Some simple and practical strategies for parallelism .......... 75
Nicholas Carriero and David Gelernter

DISCRETE AND COMBINATORIAL ALGORITHMS

Locality in computing connected components .................. 89
Abhiram Ranade

Routing in optical and wireless networks ....................... 101
Eric J. Schwabe

Transparent parallel transactions on
replicated autonomous databases .................................. 117
Rekha Goel and Gautam M. Shroff

MATHEMATICS OF PARALLELIZING COMPILERS

Mathematical tools for loop transformations: From systems
of uniform recurrence equations to the polytope model .............. 147
Alain Darte
CONTENTS

NUMERICAL ALGORITHMS

The scalability of mesh improvement algorithms .................. 185
  Lori A. Freitag, Mark T. Jones, and Paul E. Plassmann

Data parallel performance optimizations using array aliasing .......... 213
  Y. Charlie Hu and S. Lennart Johnsson

Coarsening, sampling, and smoothing: Elements of the
multilevel method .............................................. 247
  Shang-Hua Teng

Some methods of parallel pseudorandom number generation .......... 277
  Michael Mascagni

Performance of parallel sparse triangular solution .................. 289
  Michael T. Heath and Padma Raghavan

Determining an out-of-core FFT decomposition strategy
for parallel disks by dynamic programming ........................ 307
  Thomas H. Cormen

PARALLEL COMPUTER SYSTEMS AND SOFTWARE

Enabling department-scale supercomputing .......................... 321
  David S. Greenberg, William E. Hart, and Cynthia A. Phillips

Providing uniform dynamic access to numerical software ............ 345
  Henri Casanova and Jack Dongarra
