CONTENTS

Foreword ................................................................. v
Preface ................................................................. vii

Nonnegative Markov chains with applications ......................... 1
  K.B. Athreya

Phase changes with time and multi-scale
homogenizations of a class of anomalous
diffusions ........................................................... 11
  Rabi Bhattacharya

Semi-Markov cascade representations of local
solutions to
3-D incompressible Navier-Stokes ................................... 27
  Rabi Bhattacharya, Larry Chen,
  Ronald B. Guenther, Chris Orum,
  Mina Ossiander, Enrique Thomann,
  and Edward C. Waymire

Amplitude equations for SPDEs: Approximate
centre manifolds and invariant measures .......................... 41
  Dirk Blömker and Martin Hairer

Enstrophy and ergodicity of gravity currents ......................... 61
  Vena Pearl Bongolan-Walsh, Jinqiao Duan,
  Hongjun Gao, Tamay Özgökmen, Paul Fischer,
  and Traian Iliescu

Stochastic heat and Burgers equations and their
singularities ........................................................ 79
  Ian M. Davies, Aubrey Truman,
  and Huaizhong Zhao

A gentle introduction to cluster expansions ......................... 97
  William G. Faris
CONTENTS

Continuity of the Itô-map for Hölder rough paths with applications to the Support Theorem in Hölder norm ................................................................. 117
   Peter K. Friz

Data-driven stochastic processes in fully developed turbulence .................................................. 137
   Martin Greiner, Jochen Cleve, Jürgen Schmiegel, and Katepalli R. Sreenivasan

Stochastic flows on the circle ............................................................... 151
   Yves Le Jan and Olivier Raimond

Path integration: connecting pure jump and Wiener processes.................................................. 163
   Vassili N. Kolokoltsov

Random dynamical systems in economics .................................................. 181
   Mukul Majumdar

A geometric cascade for the spectral approximation of the Navier-Stokes equations ...................... 197
   M. Romito

Inertial manifolds for random differential equations .................................................. 213
   Björn Schmalfuss

Existence and uniqueness of classical, nonnegative, smooth solutions of a class of semi-linear SPDEs ... 237
   Hao Wang

Nonlinear PDE’s driven by Lévy diffusions and related statistical issues ..................................... 247
   Wojbor A. Woyczynski

List of workshop participants ............................................................... 259
