### Part I: General Survey Lectures

- **Open questions in the theory of one dimensional hyperbolic conservation laws**
  - Alberto Bressan
  - Page: 1

- **Multidimensional conservation laws: Overview, problems, and perspective**
  - Gui-Qiang G. Chen
  - Page: 23

- **Mathematical analysis of fluids in motion**
  - Eduard Feireisl
  - Page: 73

- **Selected topics in approximate solutions of nonlinear conservation laws. High-resolution central schemes**
  - Eitan Tadmor
  - Page: 101

- **Stability and dynamics of viscous shock waves**
  - Kevin Zumbrun
  - Page: 123

### Part II: Specialized Research Lectures

- **Mathematical aspects of a model for granular flow**
  - Debora Amadori and Wen Shen
  - Page: 169

- **The flow associated to weakly differentiable vector fields: recent results and open problems**
  - Luigi Ambrosio
  - Page: 181

- **Existence and uniqueness results for the continuity equation and applications to the chromatography system**
  - Luigi Ambrosio, Gianluca Crippa, Alessio Figalli, and Laura V. Spinolo
  - Page: 195
Finite energy weak solutions to the quantum hydrodynamics system ........................................ 205  
   Paolo Antonelli and Pierangelo Marcati

The Monge problem in geodesic spaces ......................... 217  
   Stefano Bianchini and Fabio Cavalletti

Existence of a unique solution to a nonlinear moving-boundary problem of mixed type arising in modeling blood flow .................................................. 235  
   Sunčica Čanić, Andro Mikelić, Tae-Beom Kim,  
   and Giovanna Guidoboni

Transonic flows and isometric embeddings ....................... 257  
   Gui-Qiang G. Chen, Marshall Slemrod,  
   and Dehua Wang

Well posedness and control in models based on conservation laws .................................................. 267  
   Rinaldo M. Colombo

Homogenization of nonlinear partial differential equations in the context of ergodic algebras: Recent results and open problems .................................................. 279  
   Hermano Frid and Jean Silva

Conservation laws at a node ....................................... 293  
   Mauro Garavello

Nonlinear hyperbolic surface waves ................................ 303  
   John K. Hunter

Vacuum in gas and fluid dynamics .................................. 315  
   Juhi Jang and Nader Masmoudi

On radially symmetric solutions to conservation laws ............. 331  
   Helge Kristian Jenssen

Charge transport in an incompressible fluid: New devices in computational electronics ......................... 353  
   Joseph W. Jerome
Localization and shear bands in high strain-rate plasticity .......................... 365
   Theodoros Katsaounis and Athanasios Tzavaras

Hyperbolic conservation laws on spacetimes ......................... 379
   Philippe G. LeFloch

Reduced theories in nonlinear elasticity .......................... 393
   Marta Lewicka

Mathematical, physical and numerical principles
essential for models of turbulent mixing ............................. 405
   Hyunkyung Lim, Yan Yu, James Glimm,
   and David H. Sharp

On the Euler-Poisson equations of self-gravitating
compresible fluids .................................................. 415
   Tao Luo and Joel Smoller

Viscous system of conservation laws: Singular limits .............. 433
   Denis Serre

A two-dimensional Riemann problem for scalar
conservation laws ................................................... 447
   Hao Ying and Barbara Lee Keyfitz

Semi-hyperbolic waves in two-dimensional
compresible Euler systems ......................................... 457
   Yuxi Zheng

List of summer program participants ............................... 469
