### PART I: SIGNAL PROCESSING THEORY

|   |     |
|---|-----|
| Wide-band ambiguity function and $a \cdot x + b$ group .....  | 1   |
| <i>Louis Auslander and Izidor Gertner</i>   |     |
| On finite Gabor expansion of signals .....  | 13  |
| <i>L. Auslander and R. Tolimieri</i>  |     |
| Two dimensional FFT algorithms on data admitting<br>90°-rotational symmetry .....                   | 25  |
| <i>Gerard Bricogne and Richard Tolimieri</i>  |     |
| Displacement structure for Hankel- and Vandermonde-like matrices .....                              | 37  |
| <i>J. Chun and T. Kailath</i>   |     |
| Wavelet analysis and signal processing .....  | 59  |
| <i>R.R. Coifman</i>   |     |
| Estimating interesting portions of the ambiguity function .....                                     | 69  |
| <i>Ephraim Feig</i>   |     |
| The band method for extension problems and maximum entropy .....                                    | 75  |
| <i>I. Gohberg, M.A. Kaashoek and H.J. Woerdeman</i>   |     |
| On the complexity of pattern recognition algorithms on a<br>tree-structured parallel computer ..... | 95  |
| <i>A.L. Gorin, D.B. Roe and A.G. Greenberg</i>  |     |
| Soliton mathematics in signal processing .....  | 117 |
| <i>F. Alberto Grünbaum</i>  |     |
| Selective 'complex' reflectionless potentials .....   | 131 |
| <i>Andrew Hasenfeld</i>   |     |
| Wavelets and frames .....   | 147 |
| <i>Christopher Heil</i>   |     |
| Linear and polynomial methods in motion estimation .....  | 161 |
| <i>Thomas S. Huang and A. Netravali</i>   |     |

|   |     |
|---|-----|
| Positive definite completions: A guide to selected literature .....   | 169 |
| <i>Charles R. Johnson</i>   |     |
| An existence theorem and lattice approximations for a<br>variational problem arising in computer vision ..... | 189 |
| <i>Sanjeev R. Kulkarni, Sanjoy Mitter and T.J. Richardson</i>   |     |
| Extension problems under the displacement structure regime .....  | 211 |
| <i>H. Lev-Ari</i>   |     |
| Recent extension of the sampling theorem .....  | 229 |
| <i>Gilbert G. Walter</i>  |     |
| Generalized split Levinson, Schur, and lattice algorithms for<br>estimation and inverse scattering .....      | 239 |
| <i>Andrew E. Yagle</i>  |     |
