Foreword .................................................. ix

SIGNAL PROCESSING: PART II

I – CONTROL THEORY

Sensitivity minimization and bitangential Nevanlinna-pick
interpolation in contour integral form ................................. 3
  Joseph A. Ball, Israel Gohberg and Leiba Rodman

Uniform bounded input-bounded output stabilization of
nonlinear systems ............................................... 37
  Christopher I. Byrnes and Alberto Isidori

Operator theoretic methods in the control of distributed
and nonlinear systems ............................................. 51
  Ciprian Foias and Allen Tannenbaum

Snippets of $\mathcal{H}_\infty$ control theory ............................. 79
  Bruce Francis

Nongaussian linear filtering, identification of linear systems,
and the symplectic group .......................................... 99
  Michiel Hazewinkel

Approximation of Hankel operators: truncation error
in an $H_\infty$ design method .................................... 115
  J.W. Helton and N.J. Young

Nonlinear controller design via approximate normal forms ........... 139
  Arthur J. Krener

Feedback with delays: Stabilization of linear time-delay
and two-dimensional systems ....................................... 155
  E. Bruce Lee and Wu-Sheng Lu

Control structure selection: Issues and a new methodology .......... 195
  Manfred Morari and Jay H. Lee
II – APPLICATIONS OF SIGNAL PROCESSING

Tomography in radar ..................................................... 223
  Marvin Bernfeld

Local and global tomography ............................................ 241
  A. Faridani, F. Keinert, F. Natterer, E.L. Ritman and K.T. Smith

The phase problem of X-Ray crystallography ....................... 257
  Herbert Hauptman

Inversion of the X-ray transform from data in a limited angular range .... 275
  Steven H. Izen

The eikonal approximation in ultrasound computer tomography .......... 285
  Alfred K. Louis

Radar signal choice and processing for a dense target environment ........ 293
  Harold Naparst

Basic algorithms in tomography ....................................... 321
  Frank Natterer and A. Faridani

High resolution radar imaging using spectrum estimation methods .......... 335
  Joseph A. O’Sullivan and Donald L. Snyder

Limited data tomography in non-destructive evaluation ................. 347
  Eric Todd Quinto

Speech recognition based on pattern recognition approaches ............. 355
  Lawrence R. Rabiner

ESPRIT - estimation of signal parameters via rotational
  invariance techniques .................................................. 369
  R. Roy and T. Kailath
