# CONTENTS

Foreword ................................................................. x
Preface ................................................................. xi

Macroscopic limits of the kinetic equation ......................... 1
  *Claude Bardos, Francois Golse and David Levermore*

The essence of particle simulation of the Boltzmann equation .......... 13
  *H. Babovsky and R. Illner*

The approximation of weak solutions to the 2-D Euler equations
by vortex elements ..................................................... 23
  *J. Thomas Beale*

Limit behavior of approximate solutions to conservation laws .......... 38
  *Chen Gui-Qiang*

Modeling two-phase flow of reactive granular materials .............. 58
  *Pedro F. Embid and Melvin R. Baer*

Shocks associated with rotational modes ................................ 68
  *Heinrich Freistühler*

Self-similar shock reflection in two space dimensions ................. 70
  *Harland M. Glaz*

Nonlinear waves: overview and problems ................................ 89
  *James Glimm*

The growth and interaction of bubbles in Rayleigh-Taylor
unstable interfaces .................................................... 107
  *James Glimm, Xiao Lin Li, Ralph Menikoff, David H. Sharp,
  and Qiang Zhang*

Front tracking, oil reservoirs, engineering scale problems and
mass conservation ...................................................... 123
  *James Glimm, Brent Lindquist and Qiang Zhang*

Collisionless solutions to the four velocity Broadwell equations .......... 140
  *J.M. Greenberg and Cleve Moler*
Anomalous reflection of a shock wave at a fluid interface ............... 156
  John W. Grove and Ralph Menikoff

An application of connection matrix to magnetohydrodynamic
shock profiles ...................................................... 169
  Harumi Hattori and Konstantin Mischaikow

Convection of discontinuities in solutions of the Navier-Stokes
equations for compressible flow .................................. 173
  David Hoff

Nonlinear geometrical optics ........................................ 179
  John K. Hunter

Geometric theory of shock waves ..................................... 198
  Tai-Ping Liu

An introduction to front tracking .................................... 203
  Christian Klingenberg and Bradley Plohr

One perspective on open problems in multi-dimensional
conservation laws .................................................... 217
  Andrew J. Majda

Stability of multi-dimensional weak shocks ........................... 239
  Guy Métivier

Nonlinear stability in non-newtonian flows .......................... 251
  J.A. Nohel, R.L. Pego and A.E. Tzavaras

A numerical study of shock wave refraction at a CO₂/CH₄ interface ...... 261
  Elbridge Gerry Puckett

An introduction to weakly nonlinear geometrical optics ............. 281
  Rodolfo R. Rosales

Numerical study of initiation and propagation of
one-dimensional detonations ....................................... 311
  Victor Roytburd

Richness and the classification of quasilinear hyperbolic systems .... 315
  Denis Serre
A case of singularity formation in vortex sheet motion
studied by a spectrally accurate method .......................... 334
M.J. Shelley

The Goursat-Riemann problem for plane waves in isotropic
elastic solids with velocity boundary conditions ...................... 367
T.C.T. Ting and Tankin Wang
