CONTENTS

Foreword ................................................................. xi
Preface ................................................................. xiii
Color Plates following page 56

The microstructure of Martensite and its implications
for the shape-memory effect ................................. 1
   Kaushik Bhattacharya

Approximation and oscillations ................................. 27
   M. Chipot

Computation of twinning ......................................... 39
   Charles Collins

Computational results for a two-dimensional model
of crystalline microstructure ................................. 51
   Charles Collins, Mitchell Luskin, and James Riordan

Local bifurcation theory for thermoelastic Bravais lattices .......... 57
   J.L. Ericksen

Geometric parameters and the relaxation of multiwell energies .......... 85
   Nikan B. Firoozye and Robert V. Kohn

Variational problems for crystals with defects ....................... 111
   Irene Fonseca and Gareth Parry

The concept of a laminate ......................................... 129
   Pablo Pedregal

Multiply twinned phases and microstructures in Ni-Al:
A transmission electron microscopy study ........................ 143
   D. Schryvers

Phase transformations in β-phase shape memory alloys
studied by Hraem, Alchemi and X-Ray diffraction ............... 153
   Ken’ichi Shimizu

On the problem of two wells ...................................... 183
   Vlastimír Šverák

Some Remarks on separately convex functions .................... 191
   Luc Tartar

New variational problems in the statics of liquid crystals .......... 205
   Epifanio G. Virga
