CONTENTS

Foreword ................................................................. xi

Preface ................................................................. xiii

A shape optimization problem in inverse acoustics ................. 1
   Giovanni Crosta

On a variational equation for thin shells ......................... 25
   M.C. Delfour and J.P. Zolésio

Oriented distance functions in shape analysis and optimization ...... 39
   Michel C. Delfour and Jean-Paul Zolésio

On the density of the range of the semigroup for semilinear heat
equations ............................................................... 73
   Caroline Fabre, Jean-Pierre Puel, and Enrique Zuazua

Relaxation in semilinear infinite dimensional systems modelling
fluid flow control problems ........................................ 93
   H.O. Fattorini and S.S. Sritharan

Multidimensional inverse scattering problems in deterministic
and random media ...................................................... 113
   Semion Gutman and Michael Klibanov

Decay estimates for the wave equation ................................ 153
   Vilmos Komornik

Asymptotic behavior and attractors for nonlinear Von Kármán
plate equations with boundary dissipation .......................... 171
   Irena Lasiecka

Stabilization of the Korteweg-De Vries equation on a periodic
domain ................................................................. 195
   David L. Russell and Bing-Yu Zhang

A note concerning boundary effects and long time vibrations of
layered media .......................................................... 213
   Fadil Santosa and Michael Vogelius

On the linearised dynamics of linked mechanical structures ....... 229
   E.J.P. Georg Schmidt
