CONTENTS

Foreword ................................................................. v
Preface ................................................................. vii

Seismic coda waves: A stochastic process in earth’s lithosphere. ............ 1
Keiti Aki

One dimensional random walk in a random medium...................... 25
R.F. Anderson and S.A. Molchanov

Cascade of scaling gyroscopes: lie structure, universal
multifractals and self-organized criticality in turbulence............... 57
Y. Chigirinskaya and D. Schertzer

A non-linear model for fluid parcel motions in the
presence of many large and meso-scale vortices ....................... 83
L. Ju. Fradkin and A.R. Osborne

Scale-dependent ocean wave turbulence.............................. 97
Roman E. Glazman

A survey of cascades with applications from geosciences ............. 115
Vijay K. Gupta and Ed Waymire

The role of statistical models in turbulence theory..................... 129
J.R. Herring

Ocean circulation: flow in probability under statistical
dynamical forcing ..................................................... 137
Greg Holloway

Random topography in geophysical models ......................... 149
V. Klyatskin and D. Gurarie

Dynamical and statistical characteristics of geophysical
fields and waves and related boundary-value problems ........... 171
V.I. Klyatskin and W.A. Woyczynski

Localization of low frequency elastic waves ......................... 209
W. Kohler, G. Papanicolaou, and B. White
Stochastic forcing of oceanic motions .............................. 219
Peter Müller

Radiative transfer in multifractal atmospheres:
fractional integration, multifractal phase transitions
and inversion problems ............................................ 239
Catherine Naud, Daniel Schertzer, and Shaun Lovejoy

The morphology and texture of anisotropic multifractals
using generalized scale invariance ................................ 269
S. Pecknold, S. Lovejoy, and D. Schertzer

Short-correlation approximation in models
of turbulent diffusion .............................................. 313
L. Piterbarg

Comments on estimation and prediction for autoregressive
and moving average nonGaussian Sequences ..................... 353
Murray Rosenblatt

Probability distributions of passive tracers in randomly
moving media ...................................................... 359
A.I. Saichev and W.A. Woyczynski

Three-dimensional Burgers’ equation as a model for the
large-scale structure formation in the universe ................... 401
Sergei F. Shandarin

Non-mean field approach to self-organization of landforms
via stochastic merger ........................................... 415
Hubert Shen

Asymptotics of solutions of Burgers’ equation with random
piecewise constant data ........................................... 427
Donatas Surgailis

Modeling the spatiotemporal dynamics of earthquakes
with a conservative random potential and a viscous force ........ 443
P.L. Taylor and B. Lin

Mass transport by Brownian flows ................................ 459
Craig L. Zirbel and Erhan Çinlar
