CONTENTS

Foreword ................................................................. v
Preface ................................................................. vii

TUTORIAL OVERVIEWS

'h'-pseudodifferential operators and applications: An introduction .......... 1
Bernard Helffer

Semi-classical methods with emphasis on coherent states ................. 51
T. Paul

WORKSHOP RESEARCH PAPERS

Approximative theories for large Coulomb systems ......................... 89
Volker Bach

Semiclassical analysis for the Schrödinger operator with magnetic
wells (after R. Montgomery, B. Helffer-A. Mohamed) ................. 99
Bernard Helffer

On the asymptotic distribution of eigenvalues in gaps .................... 115
Rainer Hempel

Asymptotics of the ground state energy of heavy molecules
in the strong magnetic field ........................................ 125
Victor Ivrii

Local trace formulæ ................................................. 139
T. Paul and A. Uribe

A proof of the strong Scott conjecture .................................. 145
Heinz Siedentop

Lieb-Thirring inequalities for the Pauli operator in
three dimensions ................................................. 155
Alexander V. Sobolev

Exact anharmonic quantization condition (in one dimension) ........... 189
André Voros
