IMA Public Lectures

Tuesday, October 11, 2011, 7:00 p.m.

175 Wiley Hall, 225 19th Ave. South

West Bank, University of Minnesota, Minneapolis

Flocks and Fleets: Collective Motion in Nature and Robotics

Naomi Ehrich Leonard, Princeton University

From bird flocks to fish schools, animals move together and respond to their environment in remarkable ways; their natural collective motion patterns appear well choreographed and their collective survival strategies seem ingenious. These animal group behaviors inspire design for robotics, where demanding cooperative sensing tasks find their analogue in natural group behaviors, such as foraging and feeding. Leonard will present an introduction to the study of collective motion in nature and robotics and will show how mathematical modeling and analysis play a critical role in addressing the joint challenge to explain the enabling mechanisms in animal groups and to define provable mechanisms for robotic groups.

The IMA's Public Lecture Series features distinguished mathematicians and scientists who illuminate the role of mathematics in understanding our world and shaping our lives. These engaging and informative lectures are designed for a broad audience, appropriate for middle-school students and older.

Join the IMA on October 11 at 7 p.m. for Naomi Ehrich Leonard's lecture, "Flocks and Fleets: Collective Motion in Nature and Robotics," the first of the 2011–2012 three-part public lecture series.

Upcoming Lectures:

Avi Wigderson, November 3, 2011

Jeffrey Rosenthal, April 25, 2012

The mission of the IMA is to bring together the best minds in mathematics and science to solve pressing problems facing our society, our industries, and our planet.

The IMA is an NSF-funded institute.

The University of Minnesota is an equal opportunity educator and employer.

Printed on recycled and recyclable paper with at least 10 percent postconsumer waste material.
